

CHASSELS

Computer Systems Inc.

Archiver

Problem: Storing, retrieving and processing reports quickly, securely and accurately.

Output your MXP reports to the "Archiver" to store them in your private directory. Access your directory to forward, distribute, print, e-mail (as a PDF attachment), or just review the data. Unlimited number of directories can be created and administered. Use the powerful search capability to find text in the reports; then print selected pages. Compression and Encryption supported..

Plus Formes

Problem: Spending too much time, money and effort on custom forms.

Now you can design your complex forms (including images, logos etc.) around your data. No more expensive pre-printed forms for your invoices, picking/packing slips etc..

Executive Snapshot

Problem: Accessing critical information quickly and easily.

The Executive Snapshot allows you to draw information into your browser for review. You choose the format, you choose the data. Full "drill down", or "Zoom" is supported. Pull up an actual invoice (PDF) and instantly e-mail it to the client.

Auditing/Replication

Problem: Sensitive or vital information needs extra security or export to another application.

For security or back-up; quickly set up the monitoring of database files and fields. Review changes by time, user, or data. Replicate those changes into another database or "unwind" changes.

4 products from Chassels Computer Systems to enhance your PROGRESS® & Foresight® Applications. Four products to improve your competitive edge.
